CALVIN GACHERU MWANGI

Data Analyst • Data Scientist • AI Engineer

Nairobi, Kenya | calvin.g.mwangi@gmail.com | GitHub: @Calvin-Gacheru | LinkedIn: calvin-gacheru-057672281

PROFESSIONAL SUMMARY

Third-year Data Science & Analytics student and freelance engineer who ships functional, scalable software. Experienced in building behavioral RAG chatbots, training predictive Machine Learning models, and deploying full-stack platforms. Specializes in the complete lifecycle: managing cloud deployments, building ETL pipelines, and delivering commercial client solutions end-to-end from development to production.

EXPERIENCE

BikBat Insurance Agency

2026

Freelance Web Developer / Engineer

- Built and launched the full business website end-to-end for a live commercial client.
- Managed domain registration, DNS configuration, and cloud hosting deployments to ensure high availability.

ProdigyInfoTech

2025

Data Science Virtual Intern

- Completed 4 end-to-end data science projects spanning exploratory analysis, visualization, and predictive modeling on real-world datasets.
- Developed documented, reproducible analyses including predictive analytics, customer churn forecasting, and sentiment analysis.

PROJECTS

MySaidi - AI Productivity Assistant
Developed a full-stack web app combining a FastAPI backend with a vanilla-JS frontend. Powered by Groq's LLM to help users plan days, manage tasks, and track habits via natural conversation.

Behavioural Explainer RAG System
Built a production-grade Python RAG system utilizing Vector DBs, Docker, and LLM analysis to analyze human interactions by retrieving and synthesizing real psychological frameworks.

Arcade Kenya
Built, rebranded, and maintained a live multi-game browser platform featuring multiple playable titles, scoring systems, and a polished UI deployed on GitHub Pages.

Predictive ML Models & Healthcare AI
Developed regression ML pipelines to predict real estate/motor vehicle prices and lung cancer survival. Created a predictive classification model for maternal health risk detection from patient indicators using scikit-learn and pandas.

ETL Data Engineering & Time Series Analysis
Engineered custom ETL pipelines for automated data extraction and transformation. Conducted deep time series forecasting and pattern analysis on large ride-share (Uber) datasets using statsmodels.

SKILLS

Programming & Languages:

Python, HTML / CSS / JS, SQL, R, Bash

AI / ML Stack:

scikit-learn, LangChain, RAG, OpenAI API, Vector DBs, Pandas, NumPy, statsmodels, NLP, Time Series, ETL Pipelines, Prompt Engineering

Infrastructure & Tools:

Linux (Fedora), Docker, Kubernetes, Flask, FastAPI, Render, Git/GitHub

Soft Skills:

Analytical Thinking, Problem Solving, Autonomous Learning, Client Communication, End-to-End Delivery

EDUCATION & CERTIFICATIONS

United States International University — Africa

Expected Graduation: 2027

BSc. Data Science & Analytics (Year 3 of 4)

- **Building AI Agents using LangGraph** (Simplilearn) – Workflow Orchestration, AI Agent Implementation
- **Data Science Virtual Internship** (ProdigyInfoTech) – EDA, ML, Churn & Sentiment Analysis
