CALVIN GACHERU MWANGI

Nairobi, Kenya | calvin.g.mwangi@gmail.com

GitHub: github.com/Calvin-Gacheru | LinkedIn: linkedin.com/in/calvin-gacheru-057672281

PROFESSIONAL SUMMARY

Third-year Data Science and Analytics student specializing in end-to-end AI and web deployments. Proven track record of engineering complete solutions, from building ETL pipelines and training predictive machine learning models to shipping live, full-stack commercial applications and agentic AI systems.

EDUCATION

United States International University — Africa (USIU-Africa)

BSc. Data Science & Analytics

Expected Graduation: 2027 (Currently in Year 3)

TECHNICAL SKILLS

- **Languages:** Python, SQL, HTML, CSS, JavaScript, R, Bash.
- **AI & Machine Learning:** scikit-learn, LangChain, RAG, OpenAI API, Vector Databases, Pandas, NumPy, statsmodels, NLP, Time Series Forecasting, Prompt Engineering.
- **Infrastructure & Tools:** Docker, Kubernetes, Flask, Render, Git, GitHub, Linux/Fedora.

PROFESSIONAL EXPERIENCE

Freelance Web & AI Developer | BikBat Insurance Agency

2025 – Present

- Engineered and launched a commercial business website end-to-end, managing domain configuration, DNS routing, and cloud hosting.
- Developed and deployed a custom Retrieval-Augmented Generation (RAG) AI chatbot using Python, LangChain, and Flask to automate client query resolution against internal agency documentation.

Data Science Intern | ProdigyInfoTech (Virtual)

2025

- Executed four comprehensive data science projects focusing on exploratory data analysis, data visualization, and predictive modeling.
- Developed machine learning models for customer churn prediction and sentiment analysis on real-world datasets, delivering fully documented and reproducible analyses.

TECHNICAL PROJECTS

- **Arcade Kenya:** Built and currently maintain a live multi-game browser platform using JavaScript, HTML5 Canvas, and CSS3, featuring custom scoring systems and a polished UI.
- **Maternal Risk Detection System:** Trained a predictive classification model using Python and scikit-learn to identify maternal health risk levels based on patient clinical indicators.
- **Predictive Pricing Models:** Built end-to-end regression pipelines to predict real estate and motor vehicle prices, encompassing deep data exploration, feature engineering, and rigorous model evaluation.
- **Lulu (AI Personal Assistant):** Engineered a natural language-driven agentic assistant utilizing NLP to parse voice and text commands for automated calendar management and cross-platform task scheduling.
- **ETL Data Engineering:** Built custom, automated ETL processes using Python and SQL for extracting, transforming, and loading structured datasets with built-in validation and logging.
- **Time Series & Uber Analysis:** Conducted statistical decomposition and time series forecasting on large-scale ride-share datasets to visualize insights and usage patterns.
- **Valen Time Love:** Deployed a customizable web application generating dynamic, shareable event proposals and booking pages on demand.
